EXPERIENCE

Software Developer Intern

Sept. 2026 – Present

Intact

Montréal, QC

- Developing Intact's public online insurance quoting flow using Angular and Spring Boot REST services.

Software Developer, Contract

May 2026 – Present

LH Sales Consulting

Montréal, QC

- Shipped a Next.js interview-debrief tool using the Gemini API. The entire recruiting team uses it after every interview to compare the transcript with each mandate requirement in a scorecard.
- Integrated the tool with Bigin CRM. In one click, recruiters can confirm field updates, advance the candidate stage and generate follow-up drafts for candidates and clients.
- Built a TypeScript Chrome MV3 extension that imports LinkedIn leads into Bigin CRM through OAuth 2.0. Because its forms come from CRM metadata, schema updates do not require code releases.
- Migrated the firm's ATS from spreadsheets to Bigin CRM using Python, pandas and the Google Sheets API. The migration flagged duplicates across sheets and kept inconsistent legacy data separate instead of altering it.

DevOps Developer Intern

Sept. 2025 – Dec. 2025

Intact

Montréal, QC

- Top contributor to a Node.js application other development teams relied on for production releases.
- Built the application's Jira and ServiceNow integration. It automated five manual steps across five services and generated security reports that link each code change to its Request for Change.
- Built and maintained CI/CD infrastructure for development teams across the organization.
- Built GitHub Actions workflows that ran tests, built Podman images and deployed them to Kubernetes through ArgoCD.

Software Developer Intern

Jan. 2025 – May 2025

Genetec

Montréal, QC

- Built reusable web components in TypeScript and StencilJS for Genetec's design system. Teams used them in HTML, React and Angular applications.
- Wrote Jest unit tests and Puppeteer visual regression tests, and maintained the Storybook component reference.

EDUCATION

Concordia University

Montréal, QC

B.Eng. Software Engineering (Co-op) | GPA: 3.69

2024 – 2027 (Expected)

- Relevant Courses: Object-Oriented Programming, Data Structures & Algorithms, Operating Systems

PROJECTS

AquaScan | 1st Place, PolyHacks 2025 | *React Native, Expo*

- Won 1st place out of 47 projects at PolyHacks 2025 with a mobile app that identifies fish species from a photo and checks each catch against Quebec fishing regulations.
- Combined image recognition with a scraper of Quebec regulations to return a legality result for each species.

Agent HQ | Self-hosted AI agent orchestration | *Python, MCP, Telegram API, Tailscale*

- Building a self-hosted system that routes Telegram requests to Claude, Codex or local Ollama models. Agent profiles keep credentials and permissions separate.
- Wrote MCP servers for GitHub, Google Drive and Outlook that refresh OAuth tokens. Added concurrency controls to prevent runs from colliding and covered the system with 28 pytest modules.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL

Web frameworks: Spring Boot, Angular, React, React Native, Next.js, Node.js, StencilJS

Infrastructure: Linux, Git, Docker, Podman, Kubernetes, ArgoCD, Terraform, PostgreSQL, MongoDB

APIs & testing: REST, OAuth 2.0, MCP, Gemini API, Jest, Puppeteer, pytest

Spoken: French, English
